Korvexis Therapeutics

Company One-Pager · Fictional company, portfolio demonstration

Precision-targeted nanomedicine for cancers and rare diseases that have run out of options.

Korvexis engineers lipid-polymer hybrid nanoparticles (the Thalorix platform) that carry a therapeutic payload to a specific tissue and release it there, reducing the dose that reaches everywhere else. The platform has been applied across four payload classes: small-molecule chemotherapy, siRNA, mRNA, and enzyme replacement.

PIPELINE

BN-101 (NanoDox)	HER2-low metastatic breast cancer	**Phase 2**
BN-204 (HepaSiRx)	Vasquez-Trent Syndrome (rare hepatic disorder)	**Phase 1**
BN-310	Locally advanced pancreatic adenocarcinoma	**IND-Enabling**
BN-450 (ImmunoCarrier-RSV)	RSV, adults 60+	**Phase 1/2**
BN-500	Calder-Reyes Disease (rare lysosomal disorder)	**Preclinical**
BN-600	Platform research - solid tumor targeting	**Discovery**

SELECTED REGULATORY MILESTONES

2022 - FDA IND clearance and first patient dosed, BN-101
2023 - FDA Orphan Drug Designation and IND clearance, BN-204
2024 - FDA Fast Track Designation, BN-101; Health Canada Orphan Drug Designation, BN-204
2025 - FDA IND clearance, BN-450; End-of-Phase 1 meeting, BN-101

FUNDING

Seed (2019)	$6M	Meridian Life Sciences Partners
Series A (2021)	$32M	Meridian Life Sciences Partners
Series B (2022)	$58M	Northbridge Venture Partners
Series C (2024)	$85M	Northbridge Venture Partners
